Professional Summary

Innovative and versatile programmer and designer with 7+ years in the game industry, specializing in Unity and VR development. Experienced in leading teams, optimizing workflows, and delivering engaging player experiences. Shipped multiple titles including *Home Run Derby VR* and *The Last Sky*. Adept at turning design vision into polished gameplay systems while improving performance, usability, and development efficiency.

Professional Experience

Little Guy Games | Lead Gameplay Programmer and Technical Designer
MARCH 2019 - JULY 2026 | Toronto, ON

- Designed and implemented multiple tools and movement mechanics in *Delvers*. Spearheaded a major multiplayer flow refactor which changed our previous lobby-only system to a mid-game join system which was simultaneously more stable and robust, and more versatile for inviting/hosting/joining other players.
- Led gameplay development for *Wings of Wanitu*, a VR rogue-lite prototype – implemented core flight mechanics, weapon systems, upgrade interactions, and meta-progression; managed a team of programmers and technical artists using Trello and daily stand-ups.
- Led open-world technical and gameplay design and implementation for *TMNT: Empire City*, crafting movement systems to take a simple story demo with smooth locomotion and a point-to-point teleport to a full suite of ninja-style movement including ziplines, jumping, mantling, climbing, spring-boarding and more, along with prototyping open-world quest features and navigation.
- Overhauled major menu and progression systems for *Home Run Derby VR* retail release, consistently applying VR input and feedback to player UX, as well as adding a suite of player behaviour analytics for iteration targets.
- Designed and implemented a new input calibration flow for club use, increasing calibration accuracy and reducing setup time.
- Refactored legacy Playmaker code in *The Last Sky*, reducing technical debt and improving maintainability.
- Developed a custom dialogue system integrating CeltX for streamlined writer-to-engine workflows, cutting implementation time significantly when modifying dialogue.
- Converted Unreal Engine Blueprints/C++ project into Unity/C#, enabling seamless takeover from a client project.

Jali Research | Contract Developer

JUNE 2018 - SEPTEMBER 2018, NOVEMBER 2018 - DECEMBER 2018 | Toronto, ON

- Updated Unity implementation of Jali's facial animation plugin for backend compatibility, optimizing processing time and reducing lines of code.
- Developed an Unreal Engine plugin for Jali's animation system, enabling a complete in-engine workflow from input to animation sequence, eliminating the need for external rendering software and saving minutes per animation iteration.
- Researched feasibility of real-time rendering with live input, improving performance targets for client demos.

Notable Projects

-
- | | |
|--------------------------|---|
| <i>Home Run Derby VR</i> | – Shipped retail version with improved menus, player progression, and calibration. |
| <i>The Last Sky</i> | – Led major gameplay and dialogue system improvements. |
| <i>TMNT: Empire City</i> | – Led technical and gameplay design to take a simple story prototype to a fully movement-interactive open-world, greatly expanding VR traversal to include mantling, climbing, spring-boarding and more. |
| <i>Wings of Wanitu</i> | – Designed and implemented core VR systems, led a multidisciplinary dev team. |
| <i>Delvers</i> | – Designed and implemented tools around mining, movement and combat for players. Refactored multiplayer lobby setup to allow seamless hosting/joining and remove loading screens while reducing network load. |

Skills

Programming Languages:

C++ • C# • Python • JavaScript • Java • $\text{\LaTeX}$ • C • Bash/Shell • HTML • CSS • OpenGL • LUA • SQL

Engines & Tools:

Unity Engine • Unreal Engine • Godot Engine • ShaderGraph • VFX Graph • Perforce • Git • Blender

Additional Software:

OBS Studio • DaVinci Resolve • GIMP/Photoshop • Audacity

Specialties:

Physics Manipulation • Backend Systems • UI/UX Design • Optimization • Plugin Development • Third-party Plugin Integration • Workflow Design • 3C's Gameplay Design • Systems Design • AGILE

Education

University of Toronto - St. George

Honours B.Sc in Computer Science (Specialist, Game Design Focus)

SEPTEMBER 2014 - JUNE 2018, Toronto, ON

Relevant Coursework:

Artificial Intelligence	Operating Systems	Computer Graphics
Computer Networks	Game Design / Development	UI / UX Design
